SUMMARY

Highland’s three new elementary schools are well into construction, and you will begin to see the buildings take shape this fall. Each school will feature a park-like setting and floor plans include a cafeteria with a stage, gymnasium and classrooms with extended learning areas allowing instructional flexibility for years to come.

ELEMENTARY SCHOOL PROGRESS

At Granger Elementary, underground plumbing is complete and underground electric and bearing masonry is almost finished. The construction crews are currently preparing to pour the concrete slab and erect structural steel. The slabs and steel erection will complete later this month, with roof decking, brick veneer and roofing to follow.

At Hinckley Elementary the final two retaining walls have been built along with the cast-in-place concrete water vault and concrete footings. Underground plumbing and electrical are near completion and the team is preparing to pour concrete slab on grade with bearing masonry. In addition, carpentry work, masonry walls and site utilities will follow.

At Sharon Elementary the internal building cast-in-place concrete retaining wall was installed. Concrete foundations and above/below grade masonry is continuing to be installed as we progress through the month. The team is also planning to install underground plumbing and electrical through August into September.

HIGHLAND MIDDLE SCHOOL UPDATE

The Middle School is right on schedule! The roof replacement, scheduled for the summer of 2020 was just completed and the Hammond team has begun interior duct work and ceiling replacements throughout the building. The team also continues to work on electrical rough-ins to support the future installation of new mechanical equipment.
